

## **“Heavy Duty Cable Management System”**

### **D-Track Jacketing Now Available from Zippertubing**

Los Angeles, CA, The Zippertubing Company is proud to announce the addition of D-Track to its product line. D-Track was developed in Europe for the Truck and Bus industry and is a complete cable management system made from flexible PVC. This unique wrap around jacketing system for wire and cable management has several advantages over Split convoluted tubing. Because it is manufactured from a flexible PVC compound there are no sharp edges to damage wires during the cable assembly process. The patented external closure system allows for much higher cable fill rates.

The wrap around or side entry allows for modular cable design reducing the total installed cost (TIC) and the D-track closure method insures that cables are not exposed to outside contaminants reducing total operating costs(TOC). This product is currently being used on trucks and busses manufactured by Daimler/Chrysler, DAF, Freightliner, Kenworth and PACCAR.

D-Track is ideal for use in automotive applications where cable bundles must be protected from the rugged environment faced by constant road use. The patented expansion feature allows for cable growth as designs changes occur. Due to its one piece construction this closed system product is practical and economical. The track closure system is also available on other jacketing materials. A low temperature version is also available. This product is available in sizes from 3/8” and up diameter cable bundles.

For more information contact your local Zippertubing Distributor for product information or contact The Zippertubing Company at 13000 S. Broadway, Los Angeles, CA 90061. Phone (800) 321-8178, Fax (310) 767-1714 or visit their web site at <http://www.zippertubing.com>.
