

“PRT-1-ES™”
Environmentally Sealed Wrap-Around Heat Shrinkable
Tubing Now Available from
Zippertubing

Los Angeles, CA – Zippertubing is proud to announce the addition of “PRT-1-ES”, a revolutionary new environmentally sealed wrap-around heat shrinkable tubing to its PRT product line. Designed specifically for extremely small diameter wires and cable repair (0.040” to 0.070”), this product combines the advantages of heat shrinkable polyolefin tubing (Mil-I-23053/5), a hot melt adhesive and the convenience of Zippertubing’s wrap-around products. This product has excellent abrasion, environmental, chemical and electrical characteristics.

“PRT-1-ES” provides a way to repair damaged wires and cables or to add additional environmentally sealed abrasion protection to existing cables, without removing the connector or associated electrical connections. Installation is easy, simply wrap “PRT-1-ES” around your cable, remove the PSA adhesive liner and adhere, to create a continuous tube. A heat gun is used to recover the material in the same manner as standard non wrap-around, heat shrinkable tubing.

For more information contact your local Zippertubing Distributor or contact The Zippertubing Company at 13000 S. Broadway, Los Angeles, CA 90061. Phone (800) 321-8178 FAX (310) 767-1714 or visit their web site at <http://www.zippertubing.com>.
