

High Temperature Shielded Braided Expandable Sleeving Now Available
from Zippertubing®
“Flex Shield-HP™”

Los Angeles, CA - Zippertubing® is proud to announce the addition of “Flex Shield-HP™”, a new high performance shielded braided expandable sleeving product that is economical, extremely flexible, lightweight with excellent shielding characteristics for EMI shielding applications. It is constructed of tin-copper foil, spirally wrapped around each aramid monofilament. Flex Shield-HP™ is available in four sizes for cables ranging from 1/16” to 1” OD and is capable of withstanding continuous operating temperatures to 150°C.

Current applications using the product include EMI shielding of in-flight entertainment systems, commercial aircraft and military electronic systems. Flex Shield-HP™ is ideal for aerospace applications where low cost, flexible shielding is required. Due to its shielded braided monofilament weave Flex Shield-HP is designed to fit a variety of shapes and sizes.
