

## “ZTZ-SP” Plier Tool

The **ZTZ-SP** tool is a Stainless Steel plier tool designed for closing Zippertubing Z-Track products. It is required for all Z-Track installations. It is a small hand held plier type tool that utilizes small finger lips to spread the channel cavity side of the Z-Track extrusion. At the same time it forces the arrowhead side of the extrusion into the open channel cavity. As the tool is slid along the cable run the channel cavity closes behind the tool trapping the arrowhead barbs within. The tool makes closing Z-Track fast and easy while minimizing operator fatigue. As the tool slides along the cable run it will form the jacket into a continuous tube. The ZTZ-SP tool should be used for all production line and field installations.

Refer to Zippertubing’s operation instruction document ZT04-98-002 to learn how to use this tool.
