

SOLVING

COMPLIANCE CHALLENGES WITH CONFIDENCE

In regulated industries, compliance is engineered into every detail. Voltage separation requirements, shielding and bonding practices, and UL-recognized component standards must all be addressed precisely. Even small oversights can result in costly delays, failed inspections, or unplanned downtime.

Zippertubing® solutions are designed to mitigate those risks before installation. Our engineered sleeving products support proper voltage isolation, organized cable routing, and clearly defined separation pathways, helping OEMs and integrators meet UL, NEC, and industry-specific compliance standards with confidence.

INSTALL

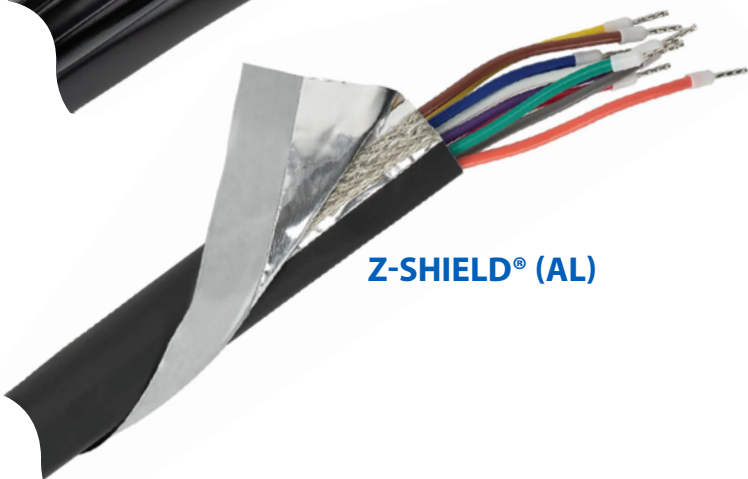

NEW SYSTEM SET-UP AND INTEGRATION

Voltage separation, secondary conduit, and flexible cable sleeving

Our advanced secondary conduit and cable management solutions have a simple wrap-around installation for versatile implementation at any stage of assembly. Zippertubing cable sleeves are UL recognized to ensure compliance and performance.

PROTECT

REPAIR, RETROFIT & UPGRADE

Return to compliance or enhance systems quickly

Zippertubing products provide a streamlined solution for repairing, upgrading, or modernizing existing installations to meet current requirements. Adding protection, shielding, or separation is done quickly without lengthy delays or system down time. Our wrap-around solutions can be installed in minutes without disconnecting or re-testing connections.

OPTIMIZE

CONTINUOUS IMPROVEMENT & 6S DEPLOYMENT

Enhancing quality, prioritizing safety, and maximizing efficiency

Well-managed cable systems are essential to lean operations. Zippertubing products reduce clutter, improve accessibility, and support standardized layouts that align with 6S and continuous improvement programs. By strengthening organization and streamlining maintenance activities, our solutions help teams sustain compliance while driving measurable gains in safety, productivity, and long-term reliability.
